

customer.contact.delete

Overview

This method allows you to delete an existing Contact from a customer.

Request

<https://api.kometsales.com/api/customer.contact.delete>

- **Method:** POST
- **Content-Type:** application/json

Input Parameters:

- **authenticationToken** (required)(string:50): Komet Sales security token.
- **contactId** (required) (integer:20): Contact ID that you want to delete. You can obtain this value from the [customer.contact.list](#) API method.

```
{
  "authenticationToken": "token_info_goes_here",
  "contactId": 20131
}
```

Response

Output:

- **status** (integer:1): transaction status. 1 for success or 0 for failure.
- **message** (string:500): description of the status of the transaction.

```
{
  "status": 1,
  "message": "Contact was successfully deleted."
}
```
